Reference Letter for Mr. Sayfi Abdulla

TO WHOM IT MAY CONCERN:

It gives me great pleasure to write this reference letter for my current, Anesthesia Technologist Colleague Mr. Sayfi Abdulla, who works together with me at Sheikh Khalifa Medical City Hospital, Abu Dhabi, UAE.

I have an almost a daily interaction with him and we work together closely in the operating theatres providing Anesthesia service for elective and emergency surgical cases, including, adult, pediatric and neonatal patient population.

Mr Abdulla is a thoroughly competent, professional, well experienced and responsible Anesthesia Tech who has top notch skills as required for his role, such as equipment management, airway handling, IV access management, patient care and safety protocols etc.

He has an in-depth knowledge and is experienced in advanced skills such as cardiac output monitoring, cell-saver, fiber-optic equipment etc. His knowledge and application of Physiology, Pharmacology and physics are of an excellent standard and his communication skills with colleagues and patients are excellent.

He initially trained in India in a large teaching Hospital and later moved to UAE where he worked in Rahba Hospital and then in Sheikh Khalifa medical city which is a tertiary referral center for pediatrics, but also has adult services including pediatric cardiac surgery and organ transplant for adults. He fits well in this multicultural workforce and possess all round skills as required by an Operating Department Practitioner. His training completion date is April 2014 and date of joining SEHA UAE is 4th December 2016.

UAE, where he has worked for seven years is a multi-cultural, multi-linguistic society with 80% expat population and both Arabic and English are widely understood and spoken as well as other languages. English, however has been adopted by SEHA (Abu Dhabi health Authority) as the preferred language of communication between healthcare workers to facilitate the huge number of non-Arabic speaking medical staff. To me, the transition from NHS UK to SEHA in UAE seemed seamless in this respect.

Sayfi speaks perfectly good English colloquially and is able to read, write and communicate in all other ways using English as the medium to a very high standard due to his high level of education and the requirement of his role and work. I would confidently, recommend Sayfi Abdulla for the role of ODP in NHS UK and am sure that he would make an excellent contribution through his professionalism and an excellent work ethic, his charming and helpful personality and his dedication to contribute positively towards the society.

Yours sincerely

Dr. Atif Razzaq Wali
